

PROJECT SUMMARY & HANDOFF DOCUMENT

WEBSITE OVERVIEW

Critter Haven Crafts website is a modern, interactive product platform built with a clean, professional design. The site allows customers to browse products, filter by category, and view detailed information. Authorized people can log in to manage products (add, edit, and remove items).

HOW THE WEBSITE WORKS

The website is organized into several main sections:

Home Page (Index)

This is the landing page that welcomes visitors and highlights key information about your crafts. It showcases featured products and introduces customers to your products.

Products Page

The shop section displays all available products in an organized grid layout. Customers can filter products by category to find exactly what they're looking for. Each product card shows a preview image and basic information. Clicking on a product opens a detailed view with full descriptions, pricing, and availability status.

About Page

This section tells your story and builds customer trust through background information and company values.

Contact Page

Provides customers with a way to reach out and get in touch with you.

Admin Update Page

A secure, admin-only area where authorized people can manage the product catalog. This page allows administrators to:

- Add new products to the shop
- Update existing product information (name, price, category, description)
- Mark products as featured or out of stock
- Upload product images

Login/Authentication System

The website includes a professional login system. Customers can create accounts and log in to access admin features. The system securely manages user credentials and distinguishes between regular users and administrators.

VALUE DELIVERED

- Professional User Experience: Customers enjoy a smooth, intuitive interface for browsing products and learning about your business.
- Admin Control: You have complete control over your product catalog without needing a developer to make changes.
- Scalability: The website is built on modern technology that can easily grow with your business. Adding new features or products is straightforward.
- Data Security: Customer information and admin accounts are protected using enterprise-grade security through Supabase.
- Fast Performance: The website loads quickly thanks to Vite and efficient code organization.

MAINTENANCE PLAN

Key Features & How to Use Them

1. Adding Products

- Log in as an admin and go to the "Update" page
- Click "Add Product"
- Fill in product details: name, price, category, description
- Upload a product image
- Mark if the product is in stock and if it should be featured on the home page
- Save the product

2. Editing Products

- Go to the Update page
- Select the product you want to edit from the dropdown
- Modify any information and save

3. Deleting Products

- Go to the Update page
- Select the product you want to remove
- Click delete

4. Managing User Accounts

- Users can create accounts through the signup modal
- Only users with admin role can access the Update page
- Contact me if you need to change a user's role

DATABASE

Database (Supabase)

Your products and user data are stored in a Supabase database. You can view and manually manage data through Supabase's web dashboard. You will have to contact me if you need to access the database directly.

KEY LESSONS LEARNED

1. Modular Design Works Best - Breaking the website into small, reusable components makes the code easier to maintain and update. If I need to change how products look, I only have to modify one component, which I did have to do and was super easy
2. Database Connection is Critical - The website's power comes from connecting to Supabase, which is a tool I have never used before, but was really easy to integrate and use
3. User Roles Matter - Having different access levels (admin vs. customer) prevents accidental changes and keeps the site secure. This was critical for having an admin page as I didnt want just anyone able to make changes to the product.

FUTURE IMPROVEMENTS & FEATURE IDEAS

To enhance your website, consider these additions:

1. Shopping Cart & Checkout
2. Product Reviews & Ratings
3. Search Functionality
4. User Accounts Dashboard
