

Database Documentation

Overview

This database supports a website that sells handmade items such as cards, papercrafts, and artwork. It currently contains two tables:

- Products
- Users

Table 1: Products

Purpose: The products table stores all items available for sale on the website.

What Data It Stores: This table contains product details that are available on the website

- Product name
- Category
- Price
- Description
- Image path
- Whether the product is featured
- Whether the product is in stock

How It Supports the Client Site

- Displays products on the shop page
- Allows filtering by category
- Highlights featured items on the homepage
- Shows availability (in stock/out of stock)

Relationships to Other Tables: Currently, this table does not have a direct relationship with other tables. In a more advanced version, it could relate to an Orders table (products purchased) or a Cart table (products added to cart)

Table Structure

<u>Column Name</u>	<u>Data Type</u>	<u>Description</u>
id	int(11)	Unique product ID (Primary Key)
product_name	varchar(100)	Name of the product
category	varchar(100)	Product category
price	float	Product price
description	text	Product description
image	text	Image file path
featured	tinyint(1)	1 = featured, 0 = not featured
in_stock	tinyint(1)	1 = in stock, 0 = out of stock

Primary Key: id

Foreign Keys: None

Create view

The screenshot shows the 'Table structure' view for the 'products' table. It lists the columns and their attributes.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	id	int(11)			No	None			Change Drop More
2	product_name	varchar(100)	utf8_unicode_ci		No	None			Change Drop More
3	category	varchar(100)	utf8_unicode_ci		No	None			Change Drop More
4	price	float			No	None			Change Drop More
5	description	text	utf8_unicode_ci		Yes	NULL			Change Drop More
6	image	text	utf8_unicode_ci		Yes	NULL			Change Drop More
7	featured	tinyint(1)			Yes	NULL			Change Drop More
8	in_stock	tinyint(1)			Yes	NULL			Change Drop More

Table 2: Users

Purpose: The users table stores registered users of the website.

What Data It Stores: This table contains information about the user for logging in and out as well as storing customer data.

- Username
- Email address
- Password

How It Supports the Client Site

- Allows users to create accounts
- Enables login functionality
- Supports future features like:
 - Order history
 - Saved carts
 - User profiles

Relationships to Other Tables: Currently, there are no foreign keys though in a more advanced system, it could relate to an Orders table (user purchases) and a Cart table (user shopping cart)

Table Structure

Column Name	Data Type	Description
id	int(11)	Unique user ID (Primary Key)
user_name	varchar(100)	Username
user_email	varchar(100)	User email
password	varchar(100)	User password

Primary Key: id

Foreign Keys: None

Screenshots:

The screenshot displays the phpMyAdmin interface for a database named 'ma17328m_crtier_haven_crafts_db'. The 'Table: users' is selected, and the 'Structure' tab is active. The table structure is shown as follows:

Column Name	Data Type	Description
id	int(11)	Unique user ID (Primary Key)
user_name	varchar(100)	Username
user_email	varchar(100)	User email
password	varchar(100)	User password

The 'SQL' tab is also active, showing the query: `SELECT * FROM `users``. The query results are displayed in a table with 4 rows (0-3):

	id	user_name	user_email	password
☐	0	meghan	meghan.andrews14@gmail.com	test
☐	1	john_doe	john@example.com	password123
☐	2	jane_smith	jane@example.com	securepass456
☐	3	mike_ross	mike@example.com	letmein789

The interface includes various navigation and operation buttons such as 'Browse', 'Structure', 'SQL', 'Search', 'Insert', 'Export', 'Import', 'Operations', and 'Triggers'. The 'Query results operations' section at the bottom provides options like 'Print', 'Copy to clipboard', 'Export', 'Display chart', and 'Create view'.
